Money Earns Money

The topic: Money Earns Money generated keen interest among Shishyans. From preparing bank statements to researching the rates of interest in various countries and also learning the logos of different banks, they did it all.

The guest lecture by Mr. Maninder Singh was interesting and interactive. Students came up with interesting questions as to how to make their money grow MORE, what the banks do with so much money, how the loans taken from other countries are repaid, etc.

Their research on the rates of interest in India, England, China and Qatar was a real eye opener. They were happily surprised to learn that India gives the highest interest on savings. Their mathematical skills were put to test when they solved the worksheets based on calculation and comparison of interest rates in different countries.

The quiz was an enriching activity. It included a variety of questions on bank transactions. The section of matching the banks with their logos proved to be very interesting.

All the educators of the Maths dept worked as a team to ensure that each activity planned as part of this project was completed successfully and was enriching as well as interesting. Increased awareness about money, money transactions, the importance of saving and an idea of the functioning of banks was definitely some of the important takeaways from this project.
