

Emerging Economies Across the World

This involved an exhaustive study of the economies of India, China, South Africa, Russia, Thailand, Columbia, Mexico, Brazil, Indonesia, Turkey, Poland, Zambia, Namibia and South Korea.

This topic was very relevant to the students of Classes IX and X, as their regular syllabus includes an overview of the emerging economies. However, for the British Council project they had to carry out a detailed research which was very enriching for them.

To take the project forward, sections were allotted separate countries for study and they presented their findings in project files. The contribution of these economies to the global economy were presented through Power Point Presentations. The guest lecture by Mrs. Sheetal Tiwari was very interesting and enriching.

The highlight of the project was the collaboration with overseas schools. We were fortunate to receive collaboration from 02 schools. One was Port Moresby International School from Papua New Guinea and the other was Solnechny Secondary School, Compulsory School #1.

Students of both the schools made a Power Point Presentation highlighting the salient features of the economy of their countries which was shown to the students of our school. Mrs. Anuradha Guru and Ms. Vibhuti Guru from Papua New Guinea also held an interactive session with our students.

Overall the students found the study of emerging economies very interesting and they participated whole heartedly in all the activities that it involved. This study was one small step towards widening the horizon of the students and making them global citizens.
