

Subject: Maintenance of White Shirt

Dear Parents
Namaste

Clean and well kept clothes are an evidence of a disciplined life and Shishukunj insists on it.

It has been observed that white shirts of several students aren't white anymore. They have turned either pale, greyish or drab because of improper/irregular washing or as a consequence of washing them in hard water. Also, a few students have only two shirts which begin to look worn out and lusterless after 4-5 months.

We suggest that each student should have at least three shirts so that they can be washed regularly as explained below, and worn in turns. This will help retain the whiteness of the shirts for a longer time. It is important to handle the white shirts in such a manner where the colour remains effulgent and does not look shabby.

Shishukunj would like to extend a helping hand and suggest you some elementary solutions to keep the shirts white:

1. 1 cup (180 grams approximately) of baking soda could be added in 4 litres of warm water, the cloth should be soaked for at least 2 hours and then washed separately with a soft detergent.
2. 4 table spoons of lemon juice could be added in warm water and the white cloth should be soaked for 2 hours, after that it can be washed with a soft detergent.
3. Half a cup of white vinegar (120 ml approximately) could be added to warm water and the white cloth should be left to soak for at least 2 hours and then washed with soft detergent.
4. Soft bleaches are available in the market for white clothes; they also help in getting rid of the pale look.

Points to Remember:

- a. Whites should always be washed separately.
- b. Please refrain from adding any kind of bleach with lemon, vinegar or baking soda, they react when mixed with other artificial bleaching agents.

We are certain that you will join hands with us in upholding the sanctity of the school uniform.

Regards
Head of Operations
Shishukunj
